Professional Summary

Software engineer and creator passionate about building modern, high-performance web applications, interactive digital experiences, and scalable software solutions. Skilled in modern JavaScript/TypeScript frameworks, full-stack systems, clean UI/UX principles, and robust API development.

Academic & Project Experience

Software Engineer & Creator

Experienced in developing modern responsive web applications and systems, writing clean, maintainable architecture and delivering user-centered digital products.

* Engineered interactive, responsive front-end applications using React, TypeScript, and modern CSS frameworks, achieving high responsiveness and accessibility.
* Architected and deployed full-stack RESTful APIs and real-time backend integrations using Node.js, Express, and cloud database storage.
* Integrated secure authentication, Firestore persistent database schemas, and performance optimizations including modern WebP compression and responsive image streaming.
* Maintained rigorous version control workflows on GitHub, adhering to clean code standards, modular design patterns, and cross-platform reliability.
* Passionate about combining functional engineering with 3D design and motion to create memorable digital web experiences.

Education

Bachelor of Science in Software Engineering (Ongoing)

Bule Hora University | Expected Graduation: 2028

Featured Projects

- Village Cafe

A responsive restaurant website for exploring the menu, viewing items, and placing orders online.

- Got U — Social Media Platform

A modern social media platform connecting communities through engaging digital interactions, real-time messaging, and multimedia sharing.

- EthioMerit — Public Recruitment & Anti-Corruption Platform

A public recruitment platform designed to promote transparent hiring, fairness, and accountability in candidate evaluation.
